Medically supervised weight management program summary

BLUEBONNET MEDICAL WEIGHT MANAGEMENT PROGRAM

Program summary letter 07/15/2026

Participant: Delphine Mattox

Supervising physician: Kofi Ampofo, MD (Obesity Medicine)

Enrolled 01/08/2026, final visit 07/09/2026: 7 monthly physician/dietitian visits, all attended.

Interventions: 1,400 kcal meal plan with food logs; activity goal 150 min/wk (achieved ~90 min/wk due to knee pain); behavioral counseling; phentermine 15 mg 02/05-04/20/2026, stopped for BP elevation and palpitations. GLP-1 RA not added (already on insulin; pt declined injectable add-on, cost).

Weights: start 268.0 lb -> nadir 261.2 lb (05/2026) -> final 262.4 lb. Total loss 2.1%.

Outcome: did not achieve 5% weight loss goal. Medical management unsuccessful. Referred to bariatric surgery.

Primary care letter

WILLOW BEND PRIMARY CARE

09/02/2026

Re: Delphine Mattox

Active problems: T2DM since 2014, on insulin glargine 46 u + metformin; HTN on lisinopril 20 + amlodipine 5; severe OSA on CPAP; bilateral knee OA.

I support bariatric surgery. Her diabetes has worsened despite medication changes.

Surgical plan

BLUEBONNET BARIATRIC - OPERATIVE PLAN / LEVEL OF CARE

Date: 09/30/2026

Patient: Mattox, Delphine R. MBR-70218

Procedure: laparoscopic Roux-en-Y gastric bypass (CPT 43644). Admit 11/09/2026, inpatient.

Expected LOS: 2 midnights.

Rationale: severe OSA requiring CPAP and continuous pulse oximetry post-op; insulin-requiring T2DM needing insulin dose reduction and glucose monitoring as diet advances; HTN med adjustment.
