Prior Authorization Request - Procedure

Health plan: Humana Medicare Advantage · Standard pre-service review

Date of request: 10/07/2026
Member name: Kimberly Shaw
Date of birth: 08/19/1968 (age 58) Sex: F
Member ID: MBR-43006
Requesting MD: Dr. Meera Iyer, MD - Pain Medicine
NPI: 1588203741
Practice: Lakeview Pain and Spine Center
Requested service: Permanent spinal cord stimulator implant (pulse generator and percutaneous leads)
CPT: 63685
ICD-10: G89.4, M96.1 (Post-laminectomy syndrome)
Planned procedure date: 11/12/2026
Place of service: Hospital outpatient department, St. Anne Regional Hospital (outpatient surgery)
Submitted by: Dana Pruitt, Authorization Coordinator (419) 555-0140

Pain Medicine Consultation

Date: 08/18/2026 Patient: Kimberly Shaw, age 58

History

Failed back surgery syndrome after L4-L5 fusion in 2022. Chronic intractable low back and leg pain for 3 years. Pain is neuropathic, radiating down the left leg. Average pain NRS 8/10.

Conservative treatment tried

Gabapentin and duloxetine for over 12 months, physical therapy 24 visits in 2025, two epidural steroid injections and a medial branch block, and 8 sessions of pain psychology (CBT for chronic pain). None gave lasting relief.

Screening

Evaluated by our multidisciplinary team: pain medicine (history and full physical and neurologic exam), physical therapy, and a psychological evaluation by Dr. Paul Grant, PhD (report attached). MRI reviewed: no new surgical lesion.

Substance use

Active opioid use disorder, not in treatment. Urine drug screen 8/18/26 positive for non-prescribed fentanyl and methamphetamine.

Education

We had an extensive discussion of the risks and benefits of spinal cord stimulation, the trial, the permanent implant and the alternatives. Written materials given. Patient understands and wants to proceed.

Plan

Spinal cord stimulator trial, then a permanent implant if the trial is positive. The permanent implant will be done in: Hospital outpatient department, St. Anne Regional Hospital (outpatient surgery).

Psychological Evaluation - Pre-SCS

Date: 08/26/2026 Patient: Kimberly Shaw Evaluator: Dr. Paul Grant, PhD, Clinical Psychologist

Psychological screening for spinal cord stimulation completed: clinical interview, PHQ-9 (14), GAD-7 (12).

Active substance use: non-prescribed fentanyl and methamphetamine. Not engaged in treatment.

Conclusion

Not psychologically cleared. I recommend substance use treatment before any spinal cord stimulator therapy.

Spinal Cord Stimulator Trial Report

Trial dates: 09/14/2026 to 09/21/2026 (7 days) Patient: Kimberly Shaw Member ID MBR-43006

Trial

Percutaneous trial with two temporary epidural leads at T8 to T10, placed in the hospital outpatient department. This was the patient's first spinal cord stimulator trial. No prior SCS trials in any spinal region.

Pain

Target pain NRS 8/10 before the trial and 7/10 during the trial: a 12% reduction in target pain.

Medication

Medication unchanged: oxycodone 30 mg a day before and during the trial (no reduction).

Function

No functional improvement: walking tolerance stayed at 1 block, sitting at 15 minutes.

Result

The trial was not successful. Only a 12% reduction in pain, no medication reduction and no functional gain. Patient still requests the permanent implant.

Meera Iyer MD 9/22/26
